Sequence 11, Application US/08975080

Patent No. 6645523

GENERAL INFORMATION:

TITLE OF INVENTION: SURVIVIN, A PROTEIN THAT INHIBITS
TITLE OF INVENTION: CELLULAR APOPTOSIS, AND ITS MODULATION

NUMBER OF SEQUENCES: 3

CORRESPONDENCE ADDRESS:
ADDRESSE: MORGAN, LEWIS & BOCKIUS LLP

STREET: 1800 M Street, N.W.
CITY: Washington
STATE: D.C.
COUNTRY: USA
ZIP: 20036-58669

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk

Sequence 7, Application US/09171482A

Patent No. 618449

GENERAL INFORMATION:

APPLICANT: Ranu, Rajinder S.

TITLE OF INVENTION: A 1-AMINOCYCLOPROPANE-1-CARBOXYLATE SYNTHASE GENE FROM
TITLE OF INVENTION: A 2-AMINOCYCLOPROPANE-1-CARBOXYLATE SYNTHASE GENE FROM
TITLE OF INVENTION: A 2-AMINOCYCLOPROPANE-1-CARBOXYLATE SYNTHASE GENE FROM
TITLE OF INVENTION: A 2-AMINOCYCLOPROPANE-1-CARBOX IN ROSES
CURRENT APPLICATION NUMBER: US/09/171,482A
CURRENT APPLICATION NUMBER: PCT/US97/17644, Published under WO98/14465; US5,824,875
EARLIER PILING DATE: 1999-Sept-30, Published 1998-April-09; 1996-Oct-01
NUMBER OF SEQ ID NOS: 9
SEQ ID NO 7
SEQ ID NO 7
ILBNGTH: 35
PATEUR NO. 2824875

GENERAL INFORMATION:
APPLICANT: RANU, RAJINDER S.
TITLE OF INVENTION: ONTHARE GENES FROM PELARGONIUM TO CONTROL ETHYLENE LEVELS
TITLE OF INVENTION: SYNTHARE GENES FROM PELARGONIUM TO CONTROL ETHYLENE LEVELS
TITLE OF INVENTION: IN GERANIUMS
TITLE OF INVENTION: IN GERANIUMS
CORRESPONDENCES: 13

Patent No. 6100044

GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.
TITLE OF INVENTION: Polypeptides That Include Conformation-
TITLE OF INVENTION: Constraining Groups Which Flank A Protein-Protein Interaction
TITLE OF INVENTION: Site
                                                                                                                                                                                                                                         GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11, Application US/08724194
Patent No. 5824875
GENERAL INFORMATION:
APPLICANT: RANU, RAJINDER S.
TITLE OF INVENTION: ONE-AMINOCYCLOPROPANE-1-CARBOXYLATE
TITLE OF INVENTION: SYNTHASE GENES FROM PELARGONIUM TO CONTROL ETHYLENE LEVELS
TITLE OF INVENTION: IN GERANIUMS
TITLE OF INVENTION: IN GERANIUMS
TITLE OF INVENTION: IN GERANIUMS
TORRESPONDENCE S. 13

US-08-159-339A-824

US-08-159-339A-824

Sequence 824, Application US/08159339A

Patent No. 6037135

GENERAL INFORMATION:

APPLICANT: Kubb, Ralph T.

APPLICANT: Gette, Alessandro

APPLICANT: Celis, Esteban

TITLE OF INVENTION: Uses

NUMBER FOF SEQUENCES: 1254

CORRESPONDENCES: 1254

CORRESPONDENCE ADDRESS:

STREET: Two Embarcadero Center, Eighth Floor

CITY: San Prancisco
                                                                                                                                                                                                                     Patent No. 5182210

APPLICANT: BINNS, MATTHEW M.; BOURSNELL, MICHAEL E.G.;
CAMPBELL, JOAN I.A.; TOMLEY, FIONA M.
TITLE OF INVENTION: FOWLFOX VIRUS PROMOTERS
NUMBER OF SEQUENCES: 22

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides vectors and host cells comprising succibns, is method of producing the peptides comprising recombinant production, optionally followed by chemical modification, an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting and/or diagnosing diseases of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with companying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                     compounds which induce growth hormone secretion and calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ghrelin-like growth hormone secretagogue (GHS) core region peptide #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides occuprising recombinant production, optionally followed by checitors and host cells comprising security production, optionally followed by checitorical modification; an antibody specific for a peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for treating and/or diagnosing diseases particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with normone deficiency. The growth hormone represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                              New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ghrelin-like growth hormone secretagogue (GHS) core region peptide #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention concentration are useful septides; the DNA encoding the peptides; cectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by compited continuention; an antibody specific for a peptide of the convention, and an assay and kit for detecting the peptides. The peptides cof the invention are useful for treating and/or diagnosing diseases companying are useful for promoting infant growth due to growth compone deficiency. The compounds of the invention are safe with con accompanying side effects. The present sequence represents a cc ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              equivalents for regulating glycogen metabolism and/or protein synthesis is the subject of the invention. This sequence can also be used in a method of the invention for identifying agents that modulate the activity of PKB. It can also be used to screen for modulators of enzymes that catalyse PKB phosphorylation. PKB (an insulin-stimulated crosstide kinase) and its analogues etc. are used to treat disease characterised by abnormal glycogen metabolism and/or protein synthesis, especially type II diabetes and cancer (specifically of breast, pancreas and ovary). The various screening methods are used to identify agents potentially useful for treating these diseases.
This sequence represents a peptide motif derived from ferritin which important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of
                                                                                                                                                                                            Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such as ferritin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a substrate for protein kinase B (PKB). The use of PKB, its analogues, isoforms, inhibitors, activators and/or functional
                                                                                                                                                                                                                                                                                                                          WPI; 1997-077284/07

the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest.

C The surrogate is capable of competing effectively with the analyte of or a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the analyte present in a sample. Functional surrogates compete effectively and with the analyte for a limiting amount of its such as this have an immunoreactive group that allows the surrogate to affinity receptor. Functional surrogates are able to mimic naturally curromate effectively and with the analyte for a limiting amount of its curromant analytes. They can be labelled for use in standard competitive affinity assays (sp. homogenous immunoassays) for detecting large of such as polypeptides, polysaccharides, polynuclectides, appropriet and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detecting include cardiac or analytes associated with infectious disease. In particular, the assays create useful for detecting ferritin, parachyroid hormone, human considered with infectious disease. In particular, the assays growth hormone, immunoglobulin E, prolactin, parachyroid hormone, human chorionic gonadotropin, human luteinising hormone, cytomegalovirus, or myoglobin, myosin light chain, troponin, carcinoembryonic antigen, any such appetitic antigen and cardinocular, and cardinocular, and cardinocular, and considered with the chain, troponin, carcinoembryonic antigen, any applicative specific antigen and cardinocular, and such cardinocular and cardinocular marker).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ghrelin-like growth hormone secretagogue (GHS) core region, SEQ ID NO:1.

```
The invention relates to a novel peptide compound or its salt which inderes the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentrated in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention can encompasses the unmodified peptides; the DNA encoding the peptides also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides of the invention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth no accompanying side effects. The present sequence respression and an entire and an effects of the invention are safe with the accompanying side effects. The present sequence respression and an effects of the invention are perpensents.
                New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody; monoclonal; chimaeric; grafted; humanised; IL-2; interleukin-2; cytokines; interleukin-2 receptor; 55kD beta chain; activated T cells; T cell mediated disease; graft versus host disease; transplant rejection; autoimmune diseases; chemotherapy; immunosuppressants; T cell typing; diagnosis; testing; detection; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                               ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Heavy chain CDR3 region for humanised anti-IL-2 receptor antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human interleukin-2 receptor antibodies - useful for treating and preventing T-cell mediated diseases e.g. graft versus host disease, transplant rejection etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the heavy chain CDR3 region from rat monocle antibody YTH 906.9.25 which binds to the 55kD beta-chain of the IL-2 receptor on activated T cells. The encoding DNA was used in the construction of humanised anti-IL2 receptor by PCR methods using CAMPATH-1H L chain as light chain template, and a humanised anti-CDA heavy chain as a template. The humanised anti-IL2 receptor Ab can be used in the treatment of T-cell mediated diseases eg. graft versus he disease, transplant rejection, and various autoimmune diseases. It may be administered alone or with chemotherapeutic or timmunosuppressive agents. In addn. it can be used for T cell typing, to isolate specific IL-2R bearing cells and for diagnosis.
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptide vectors and host cells comprising such DNA; a method of producing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Growth hormone secretagogue; GHS; ghrelin; core region; calcium concentration elevation; infant growth disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptid of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                    New peptide compounds which induce gelevate cell calcium concentrations, of infant growth disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           23-JUL-1999; 99JP-0210002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                   The peptide, which can be isolated from the ganglion of Helix pomatia or can be synthesised, has the activity to improve muscular contraction, as demonstrated by tests using anterior byssus retractor muscle.

```
A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.

                                                                                                     The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.

                                                                                                                                                                                                                                                                                                                                  The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are

WO200142276-A1

Saccharomyces cerevisiae

```
The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from Saccharomyces cerevisiae.
                                                                                                                                                                                                                         Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design -

                                                                                                                                                      ŏ
   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                    Score
                                                                                                                                                                                                                                                                                                                                                                                                                                           seq length:
